Summary

Engineering manager with 13 years in mobile and embedded software, the last 5 leading Android platform teams for automotive infotainment. Currently manage a 9-person team that ships on-device voice and driver-assist ML features across three OEM programs.

Experience

Engineering Manager, Automotive Android & Infotainment

Vantage Auto Systems — Munich, Germany | Jul 2021 – Present

- Lead a 9-engineer team building the Android platform layer for infotainment across 3 OEM programs, taking two from kickoff to production launch on schedule
- Shipped an on-device wake-word and voice-command pipeline that cut cloud round-trip latency from ~1.2s to under 200ms, now running on 400K+ vehicles
- Rebuilt the team's release process after a string of late-stage regressions; cut post-freeze critical bugs from an average of 14 per release to 3
- Hired 6 engineers over 3 years, including the team's first dedicated ML integration specialist
- Own the driver-distraction-safety review for every UI feature shipped by the team, working directly with UX and legal to keep features within the 2-second glance-time budget
- Present quarterly roadmap and platform health updates to the VP of Infotainment Engineering and two OEM technical steering committees

Technical Lead, Mobile Platforms

Meridian Mobile — Milan, Italy | Sep 2018 – Jun 2021

- Set technical direction for a 6-person Android platform team, moving the codebase off a legacy Eclair-era build system onto Gradle with modularized builds, cutting full CI build time from 38 to 11 minutes
- Designed the plugin architecture that let 4 product squads ship features independently without touching platform code, reducing platform-team code review backlog by half

- Mentored 3 engineers through promotion to senior; two now lead their own squads

Software Engineer, Mobile Platforms

Meridian Mobile — Milan, Italy | Jun 2016 – Aug 2018

- Built and maintained core Android platform services (Bluetooth stack, background task scheduling) used across the company's full app portfolio
- Diagnosed and fixed a memory leak in the background sync service responsible for roughly a third of the app's ANR reports; ANR rate dropped from 1.8% to 0.6% of sessions within two releases

Skills

Leadership: Team building & hiring, cross-functional roadmap ownership, OEM/vendor technical negotiation, performance management

Platform: Android platform engineering (AOSP internals, HAL, Bluetooth/telephony stacks), embedded C++, Kotlin, Java

ML/On-device: On-device inference pipelines, wake-word/voice models, latency & power budgeting for embedded ML

Tools: Gradle, Jenkins, Git, JIRA, Bazel

Education

B.Sc. Computer Science, University of Bologna — 2016
